

Assignment 1

BITS F463 : CRYPTOGRAPHY

(Using of same pad (key) multiple times)

In the class we discussed that using the same pad multiple times could lead to an insecure cipher. Following are hex-encoded ciphertexts that are the result of encrypting corresponding plaintexts with a stream cipher, all with the same key ($k \oplus m$). In this assignment, your objective is to decrypt the last ciphertext (Ciphertext #10). As part of the submission, you have to submit the plaintext of last ciphertext, your source code and the approach that you took to break the cipher, in three different files.

Ciphertext #1:
